challenges here.**

HTML Introduction

- Hyper Text Markup Language, commonly known as HTML, is the standard markup language for developing Web pages.
- HTML defines the layout of a Web page.
- A Web page in HTML is structured using a sequence of elements.
- These elements instruct the browser on how to present the content.
- HTML elements categorize content parts, like headings, paragraphs, and links.

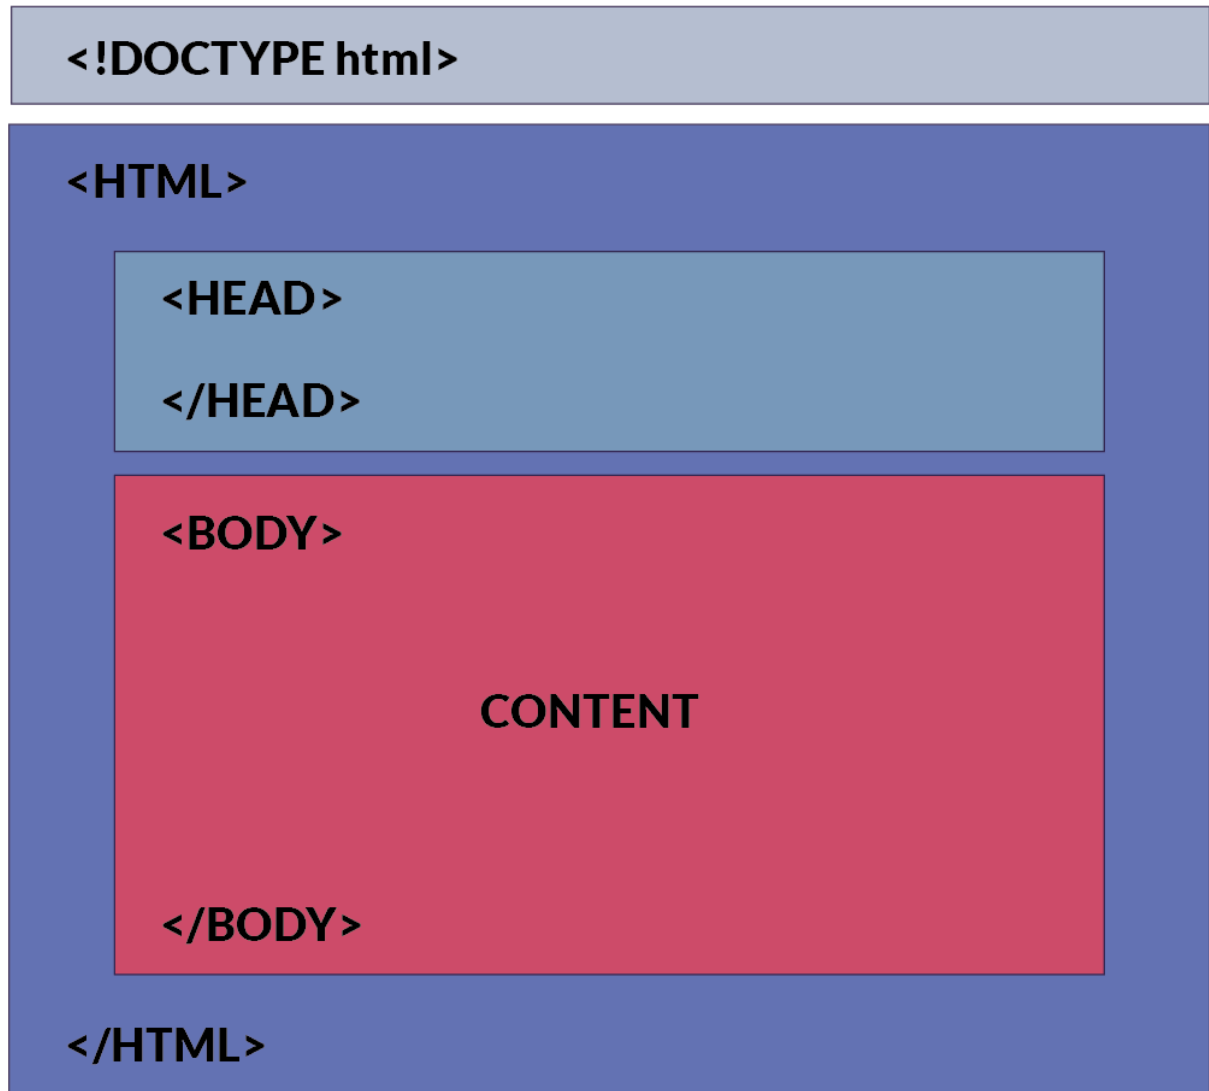

What is an HTML Element?

An HTML element is defined by a open tag or start tag, some content, and an close tag or end tag

syntax:

<open tag> content<close tag>

HTML page structure

How to create html file and editors

Step 1 :We can use Notepad or Visual Studio Code directly.

Step 2: Open Notepad (PC)

Write Some HTML Code

Example

```
<html>

<title>My 1st page</title>

<head></head>

<body>

<h1>Welcome an Let's start our Journey</h1>

</body>

</html>
```

Step 3: Save the HTML Page

Select **File > Save as** in the Notepad menu.

Save as : **Index.html**(At end we must name file “**Name.html**”)

Try it Yourself

```
<html>
```

```
<title> Day_01 </title>
```

```
<head> </head>
```

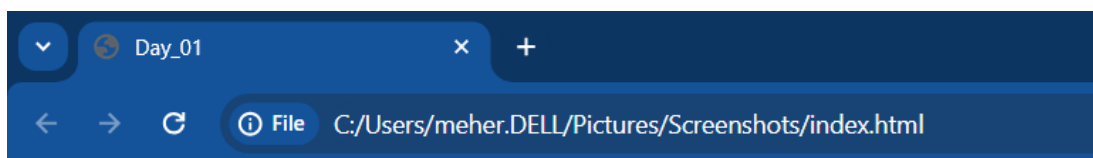

```
<body> this my day_01
```

```
<br>
```

Excited to learn

```
</body>
```

```
</html>
```
